TABLE TOP

SOLID WOOD

Only the high-quality trunks and therefore the smallest part of the total felling can be used for the furniture construction. That applies to the use of the trunk for solid wood production, too. The choice of wood is done selectively according to the requests typical for furniture.

Wood is an agile material and reacts to the room climate, i.e. it absorbs dampness of the air and dispenses it again. As a basic principle wood has the characteristic to act naturally (to expand/decrease). The technical processing shows natural characteristics; dimensional tolerances are possible. These characteristics constitute no grounds of complaint.

The solid table top is optionally available in:

- **Beech (UV laminated oil effect):** With older trees a reddening of the wood inside the trunk arises as a natural corollary, named core. This core is characterized by a beautiful, bright colouring and unique growth marks.

- **Wild oak natural (UV laminated with oil effect):** Visual characteristics of wild oak are increased arising branches, small cracks, whirls or face sides. The agility of the wood is also formed by the natural play of colours.

- **Wild walnut (UV laminated with oil effect):** With wild walnut the wide colour spectrum is varying from grey-brown to red-brown painting to the point of nearly black inlets. Also a share of light sap wood is possible. Limb and growth marks as well as different intense wood structures are characterizing the nativeness of the walnut.

- **Beam oak (UV laminated with oil effect):** Beam oak is no special kind of oak, but the name should make clear that it is a matter of specific sort of oak. Solely oak trunks that have grown in special areas and possesses as much as possible branches will be used.

Different congeries of branches and knotholes in different sizes are typical characteristics. Reworked respectively ground wind shocks and nicks as well as cross cracks in branches, grain wood cracks or growth cracks render a wide colour spectrum and are typical for beam oak.

The number of the worked cracks, splines and splittings that are deep-seated in the table top as well as they can arise on endings and edges are typical characteristics of the beam oak and no reason for complaint.

BASE FRAME

Metal frame optionally available in:

- powder-coated structural black mat
- nickel satined (stainless steel optics) against extra charge see price list

CARE INSTRUCTIONS

Never use abrasives, polishes or cleaning agents for care respectively for cleaning. Also do not apply acid or base containing chemicals. Just wipe off damply with a soft clean cloth and dry afterwards.

ORDER CHECK LIST

Please pay attention to the following issues respectively to complete specifications when ordering:

- **finish of table top**
- **finish of metal frame**

Errors and amendments excepted. Our General Terms and Conditions are effective.
